Week 2 Gantt Chart Submission – Global Event Launch

Project Overview

This document includes the Gantt Chart schedule for the upcoming global event launch. It is implemented on the project charter that was submitted in Week 1 and task breakdown, dependencies, durations, resource assignments, and milestones were included.

Team Collaboration Note

To date, at the time of making this submission, the assigned team has been non-responsive. Only three members have contributed to this deliverable. None of the participating members have prior experience with Gantt charts or formal project scheduling. Despite this, we collaborated to the best of our abilities and produced the attached schedule using Microsoft Excel as our selected tool.

Gantt Chart Tool Used

Gantt Chart was constructed with Microsoft Excel. The file contains task identifiers, names, length, relationships, resource allocation, and milestones.

Challenges Faced

- The imbalance of limited participation of teams generated workload.
- Sequencing and mapping dependencies of tasks were challenging because I had no experience with project management tools.
- The problem of estimating the durations of the tasks and putting the right resources needed further research.
- Despite these, the active members coordinated through shared files and completed the assignment.

Conclusion

This document and its attached Excel file represent our Week 2 Deliverable. We admit that it may not be at all the standard of a professional project manager, but it is an honest approach of very few people involved in the project.
